**Area Chiropractor Now Provides The Most Advanced Care  
For Whiplash And Brain Injury Victims**

Chiropractor Dr. Kelley Best is proud to announce that she is now offering what is recognized as the most advanced treatment and care system for patients suffering from whiplash and brain injury trauma. Dr. Best has been awarded her Certification In Whiplash And Brain Injury Traumatology through her studies with The Spine Research Institute Of San Diego.

This achievement makes Dr. Best one of the very few graduates of this elite program who is based in Pennsylvania.

While whiplash and the various measures of brain injury are thought of to be most common, with over 3 million whiplash injuries occurring every year, Dr. Best is now able to provide the strongest and most focused care to patients facing these injuries. Dr. Best's chiropractic health care services are the result of her studies of the work of Dr. Arthur C. Croft who is the Director and Senior Scientist of The Spine Research Institute Of San Diego.

Dr. Croft has spent the past twenty years studying the impact of whiplash and brain injuries, their long term results and the manner that the medical profession had been addressing these injuries. He developed a finely detailed multi-part program of how these injuries impact at different levels, their need to be observed, understood and studied closely and continuously during every step of the treatment process, the importance of precise patient care records, the proper role of medical equipment in treating these injuries and the many ways in which chiropractic care needs to be incorporated into the treatment process.

This advanced system of understanding and treating whiplash and brain injury trauma also makes Dr. Best one of the region's most accurate and reliable forensic experts. Dr. Best can author reports and give testimony for the many legal and medical reporting matters that arise following the onset of injuries such as whiplash and brain injury trauma as well as during the treatment process.

While her studies and knowledge are substantial, no matter if it's with a patient and their family or a medical board and court of law, Dr. Kelley Best will share her expert observations and knowledge in a manner that is effective, clear and understandable. She becomes a valuable and reassuring leader of her patient's medical team.

Dr. Kelley Best is a 1992 graduate of Penn State University and a 1996 graduate of Life University in Marietta Georgia. Dr. Best has been a practicing chiropractor for the past twelve years and is currently with Augello Chiropractic whose offices are located at 1578 Easton Avenue in Bethlehem Pennsylvania.
